

SAI KALYAN DAKA

MERN Stack Developer / Software Engineer

Hyderabad, India | +91 7032423365 | sai.kalyandaka11@gmail.com | linkedin.com/in/sai-kalyan-daka/

PROFESSIONAL SUMMARY

Software Engineer / MERN Stack Developer with 4.6+ years of experience designing, developing, and maintaining scalable web applications and production-grade backend services. Strong expertise in Node.js, React.js, Redux, JavaScript/TypeScript, ElysiaJS, Bun, Express.js, PostgreSQL, TimescaleDB, MongoDB, Cassandra, Prisma ORM, REST APIs, WebSockets, Kafka, Redis, Protocol Buffers, Docker, and microservice-oriented architecture. Experienced across frontend, backend, database optimization, real-time communication, system integration, security (Authentication, Authorization, RBAC, Encryption), debugging, and production support. Recent experience includes engineering a high-throughput trading platform covering order and position workflows, netting and hedging, instruments, accounts, and reporting.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript
- **Frontend Development:** React.js, Redux, HTML5, CSS3, Responsive UI Development, State Management
- **Backend Development:** Node.js, Express.js, ElysiaJS, Bun, RESTful APIs, WebSockets, Authentication & Authorization
- **Databases & Data:** PostgreSQL, TimescaleDB, MongoDB, Cassandra, Data Modeling, Query Optimization
- **ORM & Messaging:** Prisma ORM, Kafka, Redis, Protocol Buffers
- **Trading Domain:** Order & Position Workflows, Netting/Hedging, Instruments, Groups, Accounts, Sessions, Trading Reports
- **Architecture & System Design:** Microservices, MVC Architecture, System Integration, Clean Code, Secure API Design
- **Security & Quality:** RBAC, Encryption, Debugging, Performance Optimization, Code Reviews
- **DevOps & Tools:** Docker, Git, CI/CD, Deployment Pipelines

PROFESSIONAL EXPERIENCE

MERN Stack Developer / Software Engineer | 9X Technology Pvt. Ltd.

Hyderabad, India | March 2026 – Present

- Contributed across backend, frontend, database, and integration layers of a scalable trading platform covering core trading, administration, instruments, groups, accounts, sessions, configurations, and reporting.
- Translated functional requirements into backend microservices and REST APIs using Node.js, ElysiaJS, Bun, PostgreSQL, Prisma ORM, and WebSockets, delivering **40+ production API endpoints**.
- Implemented and refined order, position, netting, and hedging workflows, improving trade-processing reliability and reducing business-rule execution issues by **35%**.
- Built administration capabilities for instruments, symbol groups, trading groups, configurations, sessions, and reports, cutting manual configuration effort by an estimated **50%**.
- Integrated real-time and distributed service communication using WebSockets, Kafka, Redis, and Protocol Buffers, supporting **10,000+ concurrent trading sessions** with sub-**50ms message latency**.
- Collaborated on React.js and Redux interfaces to connect user-facing trading and administration workflows with backend services used by **500+ internal active users**.
- Leveraged Docker, Git, PostgreSQL/TimescaleDB, and performance-oriented database queries to support reliable platform operations, improving average query response time by **40%**.

MERN Stack Developer | ALTAI Solutions Private Limited

Hyderabad, India | May 2022 – February 2026

- Developed and owned backend development for **5+ production-grade web applications** using Node.js, Express.js, PostgreSQL, and Prisma ORM.
- Designed scalable RESTful APIs and real-time capabilities using WebSockets, integrating frontend and backend workflows end to end across **12+ core modules**.
- Translated business requirements into maintainable application features with a focus on reliability, security, and performance.

- Implemented encryption, authentication, and role-based access control (RBAC) to secure application workflows across all customer-facing modules.
- Identified and resolved N+1 query problems across tightly coupled REST APIs at the project level, reducing database load and query volume by an estimated **60%** and significantly improving application performance.
- Investigated production issues, optimized database queries and application logic, and refactored code, cutting average response times by **45%** and improving system stability.
- Participated in peer code reviews and collaborated on UI/UX improvements to deliver maintainable, user-focused applications.

PROJECTS

High-Frequency Trading Platform | *Node.js, ElysiaJS, Bun, React.js, Redux, PostgreSQL, TimescaleDB, Kafka, Redis, WebSockets, Docker*

- Engineered distributed backend microservices and real-time pub/sub event streaming pipelines handling high-frequency trading data, order execution, and live analytics dashboards.

POS & Attendance Management System | *MERN Stack (MongoDB, Express.js, React.js, Node.js)*

- Designed and developed an integrated POS and attendance management system with leave tracking, inventory workflows, and sales analytics, driving a **20% operational productivity improvement**.

YANTRA Enterprise Platform | *Node.js, Express.js, PostgreSQL, REST APIs*

- Developed and maintained scalable backend APIs for customer and merchant-facing services, maintaining 99.9% uptime and high availability during peak traffic periods.

Storefront & Retailer Web Suite | *React.js, Redux, Node.js, Express.js, Security, RBAC*

- Built responsive customer-facing web applications for product discovery, checkout, inventory tracking, and merchant administration tools with role-based access control.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

Gurunanak Institute of Engineering and Technology, India |
2022
